Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dunn et al. (5,213,165) in view of Shumaker et al. (2,842,874).

Dunn et al. discloses a land plane comprising a main frame (40) and first (58) and second (60) wing frames. A first transverse scraper blade (71,72,73,74) is mounted beneath the main and wing frames. The first transverse scraper blade has a gap (at 80) adjacent a second side (right side) of the main frame. A second transverse scraper blade (75, 76, 77) is mounted beneath the main and wing frames and is parallel to and spaced rearwardly from the first blade (parallel to portions 71, 72 of the first blade). What the Dunn patent does not disclose is that the first and second scraper blades are led by a V-shaped scraper blade mounted at the front of the main frame. Shumaker et al. teaches that it is known in the art to provide a land plane with a V-shaped scraper blade (14) having a forward apex leading a rear transverse scraper blade. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the land plane of the Dunn '165 patent with the V-shaped scraper blade as taught by the Shumaker et al. patent in order to initially spread the soil in the center of the land plane to improve the grading operation of the wider blades.

Application/Control Number: 10/772,659

Art Unit: 3671

Regarding claims 2-3: Each of the transverse scraper blades is formed from at least three separate scraper blades. The gap in the first transverse scraper blade is formed between the main (72) and the second (73) scraper blades. The wing frames (58, 60) are pivotally attached to the main frame for movement between raised and deployed positions. Hydraulic cylinders (115) cause the wing frames to pivot.

Regarding claim 4: The examiner takes Official Notice that it is known in the art to control an implement hitch with a hydraulic cylinder. It would have been obvious to provide the land plane of the Dunn '165 patent with a hydraulic cylinder between the main frame and hitch in order to provide greater control over the angle of attack of the leading scraper blades.

Response to Arguments

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Application/Control Number: 10/772,659

Art Unit: 3671

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Victor Batson whose telephone number is (571) 272-

6987. The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Tom Will can be reached on (571) 272-6998. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
